## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 50, 53-58 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bramwell et al in view of Welte.

Bramwell et al discloses a method of positioning a spray gun at a desired distance from a target surface. A pair of spots are illuminated by first and second laser light beams angled to approach one another and offset sufficiently such that the beams do not touch one another regardless of the distance to the target surface (col 2, lines 50-68; col 3, lines 1-27). The two spots form an alignment pattern, and there is caused delivery of coating material to the target surface by keeping the spots in a predetermined alignment pattern. There is not disclosed that the light beams are visible light.

Welte discloses positioning light beams as visible light (col 3, lines 55-67).

It would have been obvious to one with ordinary skill in the art to include visible light beams because Welte discloses errors in positioning (col 1, lines 17-30) and the primary reference is also concerned with positioning error.

### ***Response to Arguments***

3. Applicant's arguments filed of record have been fully considered but they are not persuasive.

As is currently claimed by applicant, the term "desired distance" can include a "fixed distance". The argument of "control of the distance between a spray gun to a target surface" is not commensurate in scope with what is claimed. There is no specific claimed nexus between distance and alignment pattern.

Regarding the recitation: "angled to approach one another and offset sufficiently such that the beams do not touch one another regardless of the distance to the target surface", this appears to be met by Bramwell et al. There is nothing in the claimed recitation that precludes divergence, as long as they "approach one another", which is seen when the beams are at the substrate surface.

***Conclusion***

**4. THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

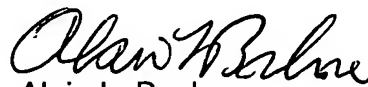

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
